

Name : Arjun gowda T S

Task : jenkins practice 8

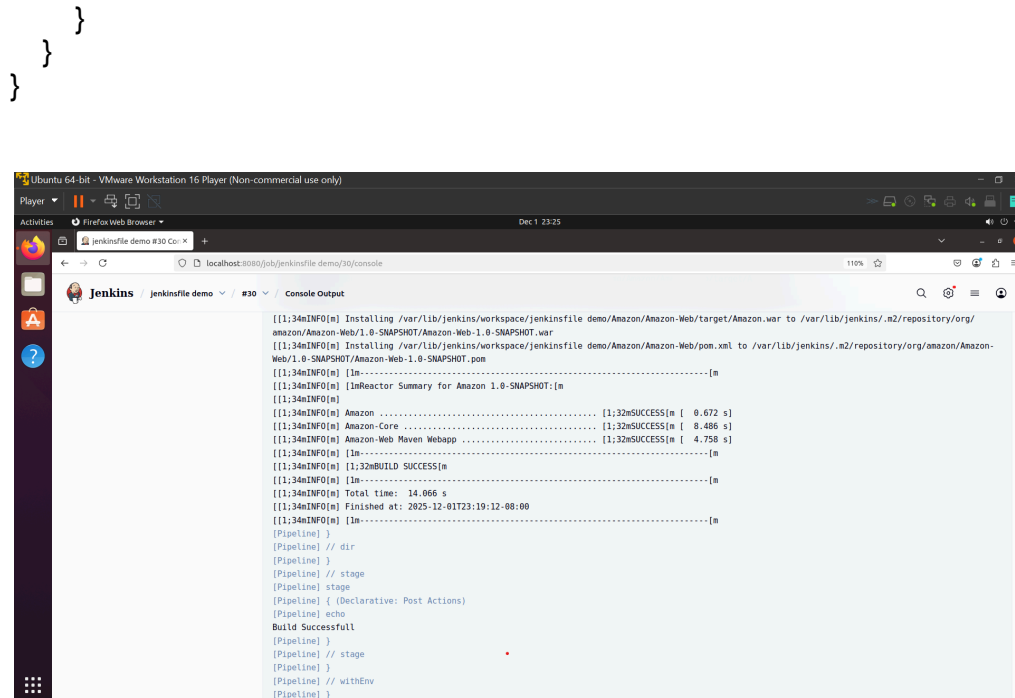

Date : 29/11/25

Demonstrate the Jenkins file .

Pipeline script :

```
pipeline{
  agent any

  environment{
    GIT_BRANCH = 'master'
    url = 'https://github.com/tsarjun/Amazon.git'
  }
  stages{
    stage('clone project'){
      steps{
        git branch:"${GIT_BRANCH}", url:"${url}"
      }
    }
    stage('compile'){
      steps{
        dir('Amazon'){
          sh 'mvn compile'
        }
      }
    }
    stage('test'){
      steps{
        dir('Amazon'){
          sh 'mvn test'
        }
      }
    }
    stage('build'){
      steps{
        dir('Amazon'){
          sh 'mvn clean install'
        }
      }
    }
  }
  post{
    success{
      echo "Build Successfull"
    }
    failure{
      echo "Build Failed"
    }
  }
}
```

- Add the Jenkins File in a different path and configure the same in the pipeline job.

```

pipeline{
  agent any

  environment{
    GIT_BRANCH = 'master'
    url = 'https://github.com/tsarjun/Amazon.git'
  }
  stages{
    stage('clone project'){
      steps{
        git branch:"${GIT_BRANCH}", url:"${url}"
      }
    }
    stage('compile'){
      steps{
        dir('Amazon'){
          sh 'mvn compile'
        }
      }
    }
    stage('test'){
      steps{
        dir('Amazon'){
          sh 'mvn test'
        }
      }
    }
  }
}

```

```

    }
    stage('build'){
        steps{
            dir('Amazon'){
                sh 'mvn clean install'
            }
        }
    }
}
post{
    success{
        echo "Build Successfull"
    }
    failure{
        echo "Build Failed"
    }
}
}

```

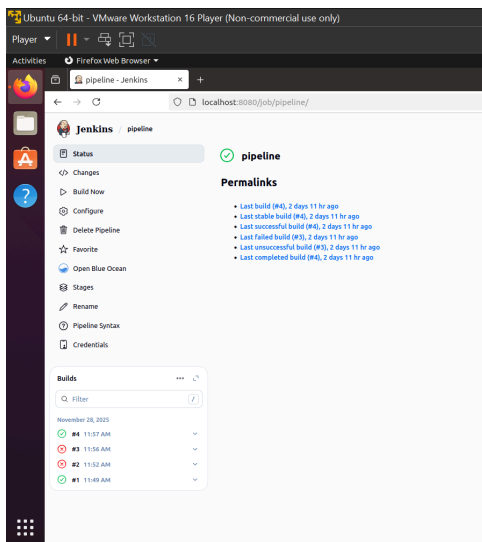

Blue ocean plugin :

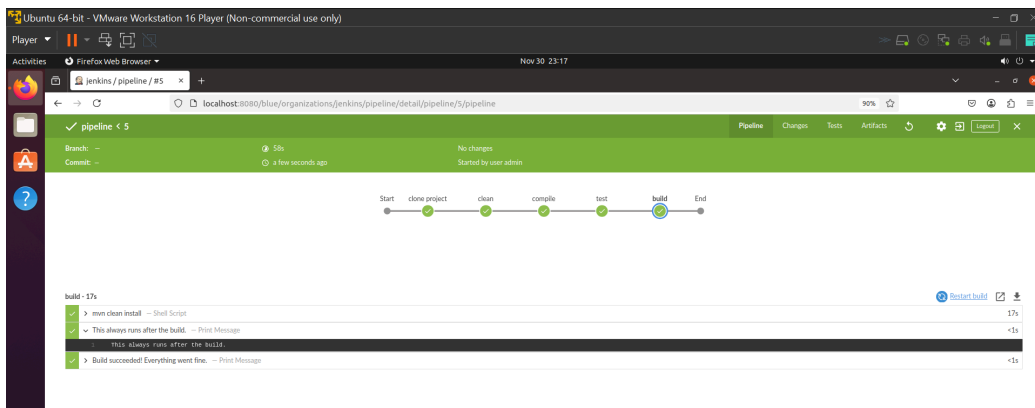

Installed the blue ocean plugin :

That blue ocean is reflecting in the UI :

Blue ocean plugin UI changes :

Configure the email in Jenkins :

Step 1: Install the Email Extension Plugin (Optional but Recommended)

1. Go to **Jenkins Dashboard** → **Manage Jenkins** → **Manage Plugins**.
2. Select the **Available** tab.
3. Search for **Email Extension Plugin** (for advanced notifications).
4. Install it and restart Jenkins if prompted.

Step 2: Configure Jenkins System Email

1. Go to **Jenkins Dashboard** → **Manage Jenkins** → **Configure System**.
2. Scroll down to **E-mail Notification** or **Extended E-mail Notification** (depending on your plugin).
3. Fill in the following fields:

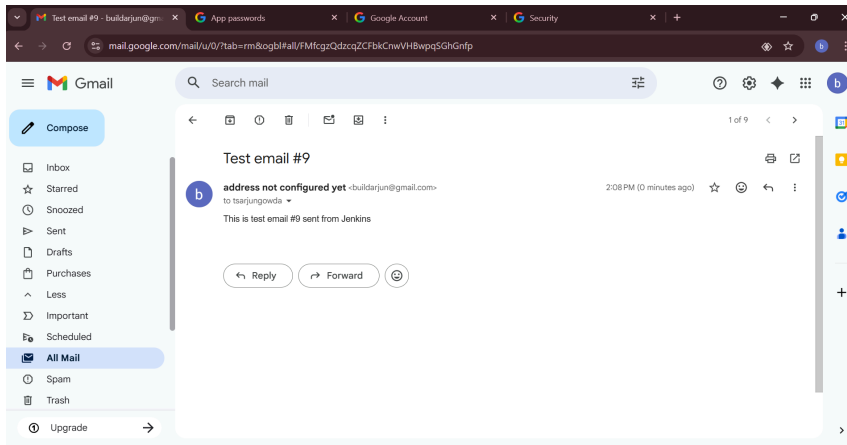

For basic E-mail Notification:

- **SMTP server:** smtp.gmail.com
- **Default user e-mail suffix:** @gmail.com
- **Use SMTP Authentication:** check this if your server requires login
 - **User Name:** your email
 - **Password:** your email password or app password
- **Use SSL:** check if required by your SMTP server
- **SMTP Port:** 587 for TLS
- **Reply-To Address:** optional

Step 3: Configure Job-Specific Email Notifications

1. Go to the **Jenkins Job** → **Configure**.
2. Scroll to **Post-build Actions**.
3. Click **Add post-build action** → **E-mail Notification** or **Editable Email Notification**.
4. Configure:

- **Recipients:** email addresses separated by commas.
- **Triggers:** choose when to send (e.g., on failure, success, unstable, etc.).
- **Content:** optional, can customize subject and body if using Email Extension Plugin.

5. Test email with the build success or failure based on the build status
// Freestyle project -> Post build -> Email notifications

Step 1: Open Your Freestyle Project

1. Go to **Jenkins Dashboard** → **Your Job** → **Configure**.

Step 2: Configure Email Notification

1. Scroll down to **Post-build Actions**.
2. Click **Add post-build action** → **E-mail Notification**.

Step 3: Set Recipients

1. In the **Recipients** field, enter the email addresses that should receive the notifications.
Example:

Step 4: Choose When to Send Emails

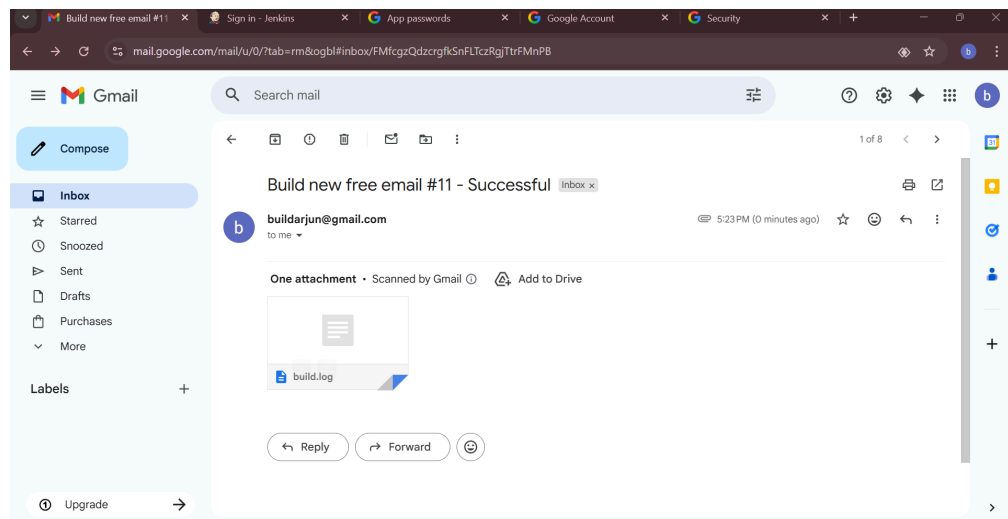

1. For basic **E-mail Notification** (default plugin):
 - The email is sent automatically on **Failure** or **Unstable** by default.
 - Jenkins will send an email only when the build fails.

2. For **Extended Email Notification** (from Email Extension Plugin):

- Click **Add Trigger** to select exactly when emails should be sent:
 - **Success** – when build passes
 - **Failure** – when build fails
 - **Unstable** – when build is unstable
 - **Still Failing / Fixed** / etc.
- This gives finer control over notifications.

Step 5: Customize Email

- You can customize **subject** and **body**:
 - Example subject: Build Status: \$PROJECT_NAME - \$BUILD_STATUS

```
// Pipeline --> Post { success { email Ext {body, sub , recipients: " " } } { failure { }}
```

Step 1: Create or Open a Pipeline Job

1. Go to **Jenkins Dashboard** → **New Item** → **Pipeline** (or open an existing pipeline).
2. Choose **Pipeline** type and click **OK**.

Step 3: Add Pipeline Script with Email Notification

1. Scroll down to the **Pipeline** section.
2. Select **Pipeline script** and write your pipeline with a **post** block for success/failure:

Step 4: Save and Run

1. Click **Save**.
2. Click **Build Now**.
3. Test both scenarios:
 - **Success:** build completes without errors → email should be received.
 - **Failure:** introduce a failing step → email should be received.

The screenshot shows the Jenkins web interface with the console output of a pipeline build. The browser address bar indicates the URL is localhost:8080/job/pipeline/7/console. The Jenkins logo and navigation tabs are visible at the top. The console output shows a successful build with various stages and a final email notification.
